- Introduction to Game Theory (6 CP)
- Monetary Economics (6 CP)
- Foundations of Public Finance (6 CP)
- Business Cycle and Employment Theory (6 CP)

12 CP from

Students have to take 12 credit points (or the difference to 36 credit points) from Elective Modules in Economics or Elective Modules in Quantitative Methods. These 12 credit points may be acquired in a semester abroad if they are graded courses from the field of Economics or Quantitative Methods.

***Important note:**

If students have already learned the content of the Mathematics I compulsory modules as part of the core subject, they have to take the course "Introduction to Econometrics".
If students have already learned the content of Mathematics II, Statistic I or Statistic II as part of the core subject, they have to take the course that is not part of the core subject.
